E-mail:

Dean: Solikhov Davlat Quvatovich

Physics first arose as a science that describes Laws of Nature using precise mathematical methods. Physical laws govern all our beautiful planet, all nature, both animate and inanimate, as well as the Solar system and the entire Universe. That is why physics has played an enormous role in the development of human civilization. Everything people use today, such as electricity, X-ray methods, radioactivity, aircraft, lasers, computers, mobile phones, quantum technologies, etc. is has something to do with discoveries made by physicists. Methods of physics research play a significant role in all natural and engineering sciences.

The Faculty of Physics is one of the oldest faculties of the Tajik national university. It was founded in 1949 as faculty of Physics and Mathematics. In 1964, the Faculty of Physics was separated from the Physics and Mathematics Faculty and continues to function as an independent faculty.

The Faculty of Physics consists of the following departments:

- Physics of solid body (Head of Department R. Kadyrov);
- Theoretical physics (Head of Department Odilov O.Sh.);
- General Physics (Head of Department Aqdodov D.M.);
- Optics and Spectroscopy (Head of Department Mulloev N.);
- Nuclear Physics (Head of Department B.I. Makhsudov);
- Physics and Methods of Teaching Physics (Head of Department Istamov F.Kh.);
- Physical electronics (Head of Department R. Khamroqulov);
- Astronomy (Head of Department Safarov A.);
- Computers, systems and networks (Head of Department Juraev Kh.Sh.).
